Difficulty: 2 Medium

Learning Objective: 01-05 Understand why sampling is important in an audit.

8.

Award: 10.00 points

---

Why do auditors often use a sampling approach to evidence gathering?

- Auditors are experts and do not need to look at much to know whether the financial statements are correct or not.
- Auditors must balance the cost of the audit with the need for precision and for some types of evidence, computer data analytic approaches can't be used.
- Auditors must limit their exposure to their auditee to maintain independence.
- The auditor's relationship with the auditee is generally adversarial, so the auditor will not have access to all of the financial information of the company.

Award: 10.00 points

The accounting processes of a business involve, among other things, individual transactions, internal controls, and account balances.

**Required:**

- A. Describe the relationship between internal controls, individual transactions, and account balances presented in the financial statements.
- B. Discuss how evidence regarding each of these three areas can help an auditor determine if the financial statements are fairly stated.

- A. A company implements internal controls as a safeguard to support appropriate capturing and recording of individual transactions, which are then collected into ending account balances. Ending account balances are then used to prepare the financial statements. The auditor expresses an opinion on the financial statements, which are made up of ending account balances and disclosures.
- B. The auditor can obtain evidence from all three areas of the accounting process. For instance, an auditor can directly test the account balance (e.g., by examining a bank statement reconciliation). Evidence that represents the auditor's direct knowledge and is supported by an independent, knowledge source outside the client is usually the highest-quality but costliest evidence. Alternatively, the auditor can obtain indirect information by testing the individual transactions that make up an account balance. If transactions are handled properly, this provides indirect evidence that the ending balances are more likely to be fairly stated. The least direct method of obtaining evidence is to evaluate and test the company's internal controls, which are implemented to ensure that transactions are handled properly. If a company's system of internal control is effective, transactions are more likely to be handled properly, and thus the ending balances making up a set of financial statements are more likely to be fairly stated. Auditors usually collect evidence relating to all three areas: internal control, transactions, and ending balances.

<b>Difficulty: 2 Medium</b>	Learning Objective: 01-06 Be able to describe the basic financial statement auditing process and the phases in which an audit is carried out.

38.

Award: 10.00 points

Sally Thompson's company, Sally's Shoes, is a successful shoe retail business with one store. Sally would like to expand to two locations, but the bank has asked for an independent audit before it will provide financing. Sally hires her brother-in-law, George Thompson, to perform the audit. George has experience in auditing non-profit organizations, and he decides to perform the audit the same way as his other audits. After completing all the steps of the audit process, George issues an unqualified opinion indicating that he is certain that the company's financial statements contain no misstatements. Comment on any potential problems with George's audit of Sally's Shoes.

**Independence:** Because George is Sally's brother-in-law, he is not considered independent. This presents a problem, both in the perceived value of the audit and in the actual objectivity of the audit. That is, George may be intentionally or unintentionally biased towards Sally's Shoes rather than its creditors. This would also violate professional standards.

**Competence:** George's competence in this audit is also questionable. While George has experience in auditing, he has no experience or knowledge of retail stores or even for-profit organizations. To successfully perform an audit, George would need to obtain an understanding of the industry. One audit should not be performed exactly the same as another—rather, audits should be tailored to the specific circumstances and risks.

**Other:** An unqualified audit opinion provides only reasonable assurance, not certainty or "absolute" assurance. It also provides assurance only with respect to the fairness of the financial statements "in all material respects;" it does not provide assurance with respect to all misstatements, only material ones.

39.

Award: 10.00 points

Explain the relationship between audit, attest and assurance services.

All three services entail the evaluation of evidence to determine the correspondence of some information to a set of criteria and the issuance of a report to indicate the degree of correspondence.

Assurance services are independent professional services that improve the quality of information or its context, for decision makers. Note that assurance services cover both nonfinancial and financial information. Assurance services can capture information, improve its quality, and enhance its usefulness for decision makers. The extended reach of this definition allows professionals to report not only on the reliability and credibility of information but also on the relevance and timeliness of that information.

Attestation is a type of assurance. Attest services occur when a practitioner is engaged to issue or does issue a report on subject matter or an assertion about subject matter that is the responsibility of another party. The practitioner is able to add reliability and credibility to information beyond traditional financial information. Examples of attest services include financial forecasts and reports on internal control.

Auditing is a specialized form of an attest service. Auditing is a systematic process of (1) objectively maintaining and evaluating evidence regarding assertions about economic actions and events to ascertain the degree of correspondence between those assertions and established criteria and (2) communicating results to interested users. Examples of audit services include compliance auditing and audits of financial statements. Auditing is a form of attest services which are a type of assurance services. However, not all assurance services are audits nor are they all attest services.

Define “information asymmetry” and discuss how it plays a role in companies in the context of the principal-agent model. Include in your discussion how information asymmetry can be reduced.

In the context of financial markets, information asymmetry is the concept that the company’s management generally has more information about the true financial position and results of operations of the entity than the absentee owner does. While management of a public company works as an agent for the stockholders, a conflict of interest is apparent because both sides seek to maximize their self-interest. This leads to a risk that the manager will not always act in the best interest of the owner and that the manager may present information in a bias manner to the absentee owner to present their management efforts in a positive way. Therefore, the owners attempt to protect themselves through monitoring. Audits provide reasonable assurance that the information presented by management is fairly stated. The owners are attempting to reduce information asymmetry by seeking out reliable company information.

Award: 10.00 points

The textbook presents the concept of auditing using an analogy that involves buying a house and hiring a house inspector. Name three desirable qualities of a house inspector and discuss how those qualities apply to an auditor and why those qualities are important for an auditor to possess.

A house inspector should be competent, which means he should possess the required training, expertise, and experience to evaluate the property for sale. An auditor should also be competent. An auditor must know the acceptable methods to perform an audit and report an opinion. Furthermore, the auditor should have or obtain knowledge of the specific industry involved in the audit so she can appropriately adjust the timing, nature, and extent of auditing procedures.

A house inspector should be objective. He should have no reason to side with the seller; he is independent of the seller's influence. In the same way, an auditor should be independent of management's influence. Financial statement audits differ from house inspections in that auditing fees are paid for by the seller instead of the buyer. Because of this, an auditor needs to maintain independence in fact and appearance to decrease bias towards the company's management and garner public confidence for the findings.

A house inspector should be honest; he should conduct himself with integrity and share all findings with the buyer. If an auditor discovers a material misstatement, she is required to report the findings to management. If nothing is done to rectify the situation and the auditor feels the financial statements are not fairly presented, she cannot issue an unqualified report.

A house inspector should be skeptical. He will not simply take the seller's assertions at face value. He will conduct his own analysis and testing. An auditor, in comparison, should always exercise professional skepticism. An auditor gathers her own evidence to determine the validity of management's assertions.

A house inspector should be responsible and/or liable. He should stand behind his assessment with a guarantee and/or be subject to litigation if he fails to act with due care. An auditor should always act with due care. When a firm issues a report, the report is signed with the firm's name to signify the firm's responsibility for performing the audit.

Provide a brief overview of the financial statement audit process using the terms “assertion,” “evidence,” and “report.”

The auditor gathers evidence about the business transactions that have occurred (economic activity and events), account balances that are reported in the financial statements (e.g., by reporting a cash balance on the balance sheet, management is asserting that the cash exists, and the company has a right to that cash), and about management (the preparer of the statements). The auditor uses this evidence to compare the assertions contained in the financial statements to the criteria chosen by the user. The auditor’s report communicates to the user the degree of correspondence between the assertions and the criteria.

---

You are a new employee at the accounting firm Murray & Murray, CPAs. Before you are assigned to your first audit, your supervisor tests your knowledge and asks you to explain the term “scope” in the context of a financial statement audit.

### Required:

- A. Provide a definition of scope.
- B. Describe what influences an auditor's determination of scope.

- A. The scope of an audit is the type and amount of audit work to be performed and the financial statements, including the time periods, being audited.
- B. The auditor’s assessments of risk and materiality influence the scope of the audit. For instance, if an auditor sets a lower materiality amount or would like to substantially reduce audit risk, the scope of the audit would be increased. In establishing the scope of an audit, the auditor must make decisions about the nature, extent, and timing of evidence to be gathered in order to evaluate management’s assertions.

Why must an auditor assess materiality as part of planning an audit engagement?

An auditor must assess materiality because to find *all* misstatements would not be cost-efficient, or even feasible. To search for all misstatements, the auditor would need to examine every transaction. In addition, relatively minor misstatements may not matter to users. For this reason, when planning and performing an audit the auditor focuses on misstatements that would affect the users' decisions (i.e. material misstatements).

Award: 10.00 points

Name and discuss the seven phases of the audit process.

1. Client acceptance/continuance: To minimize the likelihood that an auditor will be associated with companies who lack integrity, prospective auditors are required to confer with the predecessor auditor and frequently conduct background checks on top management.
2. Preliminary engagement activities: Preliminary engagement activities include (1) determining the audit engagement team requirements; (2) ensuring the independence of the audit team and audit firm; and (3) establishing an understanding with management regarding the services to be performed and the other terms of the engagement.
3. Plan the audit: The audit team must make a preliminary assessment of materiality and relevant risks. With those determinations, the audit team can assess risk relating to the likelihood of material misstatements in the financial statements. Based on these assessments, the auditor then prepares a written audit plan that sets forth, in reasonable detail, the nature, extent, and timing of the audit work.
4. Consider and audit internal control: The auditor gains an understanding of internal control to determine its effectiveness at achieving reliability of financial reporting.
5. Audit business processes and related accounts: The auditor determines and performs individual audit procedures directed toward specific assertions in the accounts that are likely to be misstated.
6. Complete the audit: The auditor evaluates the sufficiency of the evidence gathered, assesses the possibility of contingent liabilities, and searches for any events subsequent to the balance sheet date that may impact the financial statements.
7. Evaluate results and issue audit report: The auditor reaches a conclusion as to whether or not the financial statements are fairly stated. If the uncorrected misstatements incorporated into the financial statements do not cause the statements to be materially misstated, the auditor issues an unqualified report.

Short Answer

Difficulty: 2 Medium

Learning Objective: 01-06 Be able to describe the basic financial statement auditing process and the phases in which an audit is carried out.

47.

Award: 10.00 points

---

A standard, unqualified auditor's report for a public company contains three sections. Provide a brief (one or two sentences) description for each section.

The first section, *Opinion on the Financial Statements*, indicates the name of the company being audited, the financial statements and time period covered by the report, and the auditor's opinion concerning the fairness of financial statements. The second section, *Basis for Opinion*, communicates to the users, in very general terms, what an audit entails and how the audit was conducted (in accordance with the PCAOB auditing standards). The third section, *Critical Audit Matters*, identifies matters arising from the audit that involve especially challenging, subjective, or complex auditor judgment, and how the auditor responded to those matters.

Explain the relationship between sample size and materiality, and between sample size and desired level of assurance.

The size of a sample is influenced by the materiality and the desired level of assurance for the account or assertion being examined. There is an inverse relationship between sample size and materiality (i.e., if materiality increases then sample size decreases) and a direct relationship between sample size and the desired level of assurance (i.e., if the desired level of assurance increases then sample size increases).

Other than a financial statement audit, give examples of two other assurance services? How do these assurance services differ from a financial statement audit?

Services like Consumer Reports, Carfax, and Angie's List are all examples of Assurance Services. Assurance services are defined as independent profession services that improve the quality of information, or its context for decision makers. Consumer Reports sells to consumers information about products and services based on Consumer Reports' scientific testing. Carfax generates reports on used vehicles' maintenance history and vehicle damage history for used car purchasers. Angie's List provides user reviews of home project service providers. The user reviews are verified by Angie's List. All of these assurance services differ from an Audit in that Auditing Standards require auditors to issue an audit report. The Assurance Services listed provide reports, but there is no government or regulatory body that requires them to do so. When a CPA conducts an assurance service, she is focused on increasing the quality of the information. A CPA may perform an attest service such as examining prospective financial information. Also, auditing is defined as a systematic process of objectively obtaining and evaluating evidence regarding assertions about economic actions and events (i.e. financial statements) to ascertain the degree of correspondence between those assertions and established criteria (e.g. US GAAP) and communicating the results (i.e. audit report). These items are different than the more general definition of an assurance service.

The cost of capital can be generally defined as the rate of return expected by a party that provides capital to a company (e.g. an investor or a creditor). How can a financial statement audit reduce the cost of capital for a company?

An audit adds credibility to a company's financial statements. The audit reduces information risk, or the risk that information circulated by a company's management will be false or misleading. With reduced risk of poor information, anyone providing capital will have better information on which to base their capital decisions. This will lead to a lower cost to the company for obtaining capital.
