CHAPTER 1 Introducing the World of Psychology

LEARNING OBJECTIVES

1.1 Psychology Explains Your Mental Activity and Behavior

- 1.1a. Understand all bold and italic terms by writing explanations of them in your own words.
- 1.1b. Apply psychology to your life by writing an example of your own mental activity and behavior in a situation.

1.2 Psychology Teaches You to Think Critically

- 1.2a. Understand all bold and italic terms by writing explanations of them in your own words.
- 1.2b. Apply critical thinking to real life by writing an example of each of the following: an intuition, a belief, an opinion, a pseudofact, and objective evidence.

1.3 Psychology Improves Your Life

- 1.3a. Understand all bold and italic terms by writing explanations of them in your own words.
- 1.3b. Apply psychology to your life by writing one example each of how psychology can help you: do well in school, improve your personal life, and succeed at your job.

1.4 Psychology Originated in Philosophical Questions

- 1.4a. Understand all bold and italic terms by writing explanations of them in your own words.
- 1.4b. Apply the nature/nurture debate to your own life by writing an example of how one of your traits might reflect the impact of both nature and nurture.

1.5 Psychologists Investigate the Conscious Mind and the Unconscious Mind

- 1.5a. Understand all bold and italic terms by writing explanations of them in your own words.
- 1.5b. Understand the three psychology schools of thought that investigated the conscious mind and the unconscious mind by using your own words to describe each school.

1.6 Psychologists Explore Behavior and Mental Activity

- 1.6a. Understand all bold and italic terms by writing explanations of them in your own words.
- 1.6b. Apply the four psychology schools of thought that investigated behavior and mental activity by writing an example of a topic that each school of thought would investigate.

1.7 Psychologists Today Investigate Many Different Topics

- 1.7a. Understand all bold and italic terms by writing explanations of them in your own words.
- 1.7b. Apply the subfields of psychology by choosing two subfields that interest you and explaining what research topic you would study in each subfield if you were a psychologist.

1.8 Psychologists Use the Scientific Method

- 1.8a. Understand all bold and italic terms by writing explanations of them in your own words.
- 1.8b. Apply the four goals of science by writing how each one could be used to investigate students' use of active processes to learn material being read in a textbook.
- 1.8c. Understand the scientific method by naming the five steps in this cycle and explaining each one in your own words.

1.9 Descriptive Methods Describe What Is Happening

- 1.9a. Understand all bold and italic terms by writing explanations of them in your own words.
- 1.9b. Apply the three descriptive methods by explaining how you could use each one to investigate a psychological topic you are interested in.

1.10 Correlational Methods Study Relationships

- 1.10a. Understand all bold and italic terms by writing explanations of them in your own words.
- 1.10b. Apply correlations by describing one example of a correlation in your life and explaining why the relationship is not causal.

1.11 Experimental Methods Test Causation

- 1.11a. Understand all bold and italic terms by writing explanations of them in your own words.
- 1.11b. Apply experimental methods by explaining the control group, the experimental group(s), the independent variable(s), and the dependent variable(s) in a study exploring the effect of texting while driving on driving performance.

1.12 Psychologists Today Follow Strict Ethical Guidelines

1.12a. Understand all bold and italic terms by writing explanations of them in your own words.

1.12b. Understand ethical issues in psychology by summarizing in your own words the four ethical guidelines that psychologists must address in their research.

MULTIPLE CHOICE

- 1. Which of the following is the best definition of psychology?
 - a. the study of the brain and its inner function
 - b. the analysis of the mind and its unconscious thoughts
 - c. the study of mental activity and behavior based on brain processes
 - d. the study of thoughts, social interactions, and emotions

- 12. "Friendly skepticism" means
 - a. finding flaws in an argument or claim.
 - b. being open to new ideas, while also being careful before accepting them.
 - c. asking a scientist to make his or her findings public so that they can be better evaluated.
 - d. accepting all claims, as long as they are based on the scientific method.

ANS: B DIF: Easy REF: 1.2 Psychology Teaches You to Think Critically

OBJ: 1.2a

NAT: APA Goal 1, Knowledge Base in Psychology | APA Goal 2, Scientific Inquiry and Critical Thinking MSC: Understanding 13. Why do scientists avoid the term fact? a. Intuition regarding a claim is more likely to be correct. Facts depend on one's own experience and opinion. New evidence can change how claims are interpreted. d. Beliefs lead to more important findings than facts do. ANS: C DIF: Easy REF: 1.2 Psychology Teaches You to Think Critically OBJ: 1.2a NAT: APA Goal 1, Knowledge Base in Psychology | APA Goal 2, Scientific Inquiry and Critical Thinking MSC: Remembering 14. Why is the first step in critical thinking to ask, "What is the claim I am being asked to accept?" a. because some claims are so obvious that there is no need for evaluation b. so that you can evaluate the claim at face value because if the claim fits what you already believe, then you can ignore it because before you can evaluate a claim, you have to recognize and identify it REF: 1.2 Psychology Teaches You to Think Critically ANS: D DIF: Difficult OBJ: 1.2a NAT: APA Goal 1, Knowledge Base in Psychology | APA Goal 2, Scientific Inquiry and Critical Thinking MSC: Understanding 15. Which of the following is an example of critical thinking? believing that sugar causes headaches because your head hurts after you eat a candy bar concluding that eating spinach leads to a longer life after seeing an ad for spinach on television using a personal example to explain the importance of time management concluding that exercise is beneficial after evaluating the evidence of a research study ANS: D DIF: REF: 1.2 Psychology Teaches You to Think Critically OBJ: 1.2b NAT: APA Goal 1, Knowledge Base in Psychology | APA Goal 2, Scientific Inquiry and Critical Thinking MSC: Applying 16. Talisa is writing a paper on critical thinking. She wants to explain how critical thinking differs from everyday thinking. Accordingly, which sentence is Talisa most likely to include in her paper about the differences between critical thinking and everyday thinking? a. Critical thinking evaluates information and scientific research to make reasonable conclusions. Everyday thinking evaluates information and scientific research to make reasonable conclusions. Critical thinking relies on personal examples more than scientific evidence for making conclusions. d. Critical thinking and everyday thinking often result in the same conclusions. ANS: A DIF: Moderate REF: 1.2 Psychology Teaches You to Think Critically OBJ: 1.2b NAT: APA Goal 1, Knowledge Base in Psychology | APA Goal 2, Scientific Inquiry and Critical Thinking MSC: 17. You are confident that your new roommate is a critical thinker after noticing the following bumper sticker on his car: "Show me the evidence!" c. "Trust your gut!" "The only truth is no truth." d. "What is the meaning of life?" REF: 1.2 Psychology Teaches You to Think Critically ANS: A DIF: Moderate OBJ: 1.2b NAT: APA Goal 1, Knowledge Base in Psychology | APA Goal 2, Scientific Inquiry and Critical Thinking MSC: Applying 18. Which of the following is true of objective evidence? a. Objective evidence refers to information that is not influenced by personal feelings. b. Objective evidence refers to information that is influenced by personal feelings, beliefs, intuitions, or opinions. Because objective evidence relies on beliefs, personal experience, or intuition it is not important for

There is no difference between personal beliefs and objective evidence; both are equally important

critical thinking.

for critical thinking.

ANS: A DIF: Difficult REF: 1.2 Psychology Teaches You to Think Critically

Analyzing
MSC:

- 19. Which of the following is one way to determine if a piece of information is a pseudofact?
 - a. Determine if the information is true by asking your friends and peers.
 - b. Locate the source of the claim while remaining skeptical of unreliable sources, like the Internet.
 - c. If the information feels like it is true and it aligns with your opinion, then it is not a pseudofact.
 - d. There is no way to tell if a piece of information is a pseudofact.

ANS: B DIF: Moderate REF: 1.2 Psychology Teaches You to Think Critically

OBJ: 1.2b

NAT: APA Goal 1, Knowledge Base in Psychology | APA Goal 2, Scientific Inquiry and Critical Thinking MSC: Applying

- 20. Dr. Andersen only relies on using holistic methods such as aroma therapy and mindfulness to treat her patients who have depression. Based on these experiences, Dr. Andersen submits a paper to a journal, where it is peer-reviewed and then published. Which of the following is one possible reason to question her results?
 - a. Her results may be biased because she is relying only on her own experiences.
 - b. Peer-reviewed journals are notoriously unreliable.
 - c. The accuracy of her study depends on whether her findings align with common sense.
 - d. There is no reason to question her results; because she is a scientist, her results must be accurate.

ANS: A DIF: Moderate REF: 1.2 Psychology Teaches You to Think Critically

OBJ: 1.2b

NAT: APA Goal 1, Knowledge Base in Psychology | APA Goal 2, Scientific Inquiry and Critical Thinking
Applying
MSC:

- 21. Rebecca evaluates a claim and finds scientific evidence in support of the claim. Why should she still use her own logic and reasoning in deciding whether to accept the claim as true?
 - a. Only research that has been shown to be valid and replicated by other researchers is published in scientific journals.
 - b. Even research published in peer-reviewed journals can have flaws in the analysis of or methods behind the research.
 - There is no reason for Rebecca to use her own logic and reasoning; scientific evidence is seldom incorrect.
 - d. Rebecca's intuition should be the ultimate means of establishing whether the evidence is strong.

SHORT ANSWER

- 1. A) Describe the nature/nurture debate.
 - B) Discuss the modern view regarding the nature/nurture debate.

ANS:

Suggested answer:

- A) The nature/nurture debate refers to the factors that influence human behavior. Some argue that inborn, biological factors (nature) are responsible for human behavior. Others argue that human behavior is a result of a person's experiences, culture, education, or other non-inborn factors (nurture).
- B) Nowadays, psychologists recognize that both nature and nurture work together to influence human behavior. In fact, there are many examples of how nature and nurture influence each other.

2. Introductory psychology textbooks never leave out the name Wilhelm Wundt. Describe who Wundt was and explain why his accomplishments were important to the discipline of psychology.

ANS:

Suggested answer:

Wilhelm Wundt is considered the founder of experimental psychology. He established the first psychology laboratory that allowed for new ways of measuring and studying human experience. He pioneered the idea of reaction time and came up with a new method called introspection, which allowed researchers to measure conscious experience.

4. Describe the key ideas of the psychoanalytic approach.

ANS:

Suggested answer:

A key idea of the psychoanalytic approach is that much of human behavior is influenced by mental processes that occur below the level of conscious awareness. The psychoanalytic approach proposes that troubling childhood experiences and unacceptable sexual urges lead to unconscious conflicts of the mind. Psychoanalysis is a therapeutic technique that can help a person cope with unconscious conflicts. This technique allows a therapist to help a client bring the contents of his or her unconscious into conscious awareness.

7. Describe the five steps of the scientific method. In your answer, be sure to explain the difference between a theory and a hypothesis.

ANS:

Suggested answer:

The first step of the scientific method is to create a theory. A theory is a model of interconnected ideas that explains what is observed and makes predictions about the future. Next, a hypothesis is created. A hypothesis is a specific, testable prediction of what should be observed if the theory is correct. The third step is to test the hypothesis using research methods. The fourth step is to analyze the data using appropriate statistics; the fifth step is to report the results and determine what additional investigation is needed.

9. A drawback to correlational studies is the third variable problem. What does this mean? Use an example to explain your answer.

ANS:

Suggested answer:

The third variable problem describes the possibility that a third variable can explain the relationship between two variables in a correlational study. For example, drinking alcohol before driving can be highly correlated with distracted driving. However, stress could be a variable that causes people to both drink and drive and also to be distracted while driving. Thus, the third variable, stress, prevents us from understanding an outcome in a correlational study. It is one of the reasons why we cannot infer causality from a correlational study.

10. Deshawnda has just read an article reporting a "strong correlation between baldness and heart attacks." She concludes that one should never shave one's head because it will cause one to have a heart attack. Evaluate Deshawnda's interpretation of this article. Explain why you agree or disagree with her conclusion.

ANS:

Suggested answer:

Students should disagree with Deshawnda's interpretation. Deshawnda is incorrectly inferring a causal relationship from a correlation. A correlation study merely describes the relationship between two variables. Deshawnda may only conclude that a change in one variable causes a change in another variable when an experimental design is being used.

DIF: Moderate REF: 1.10 Correlational Methods Study Relationships

12. Many studies use random assignment when placing research participants into the conditions of an experiment. First, describe random assignment. Then, explain why it is important for an experimenter to use random assignment.

ANS:

Suggested answer:

Random assignment involves placing research participants into the conditions of an experiment in a way that allows each participant to have an equal chance of being assigned to any level of the independent variable. Random assignment is an important part of experimental design because it creates two (or more) identical groups. That is, if random assignment is used, the two groups should be equal on all variables expect for the one independent variable that the experimenter is manipulating. In other words, random assignment balances out all unknown factors.

15. Michael Scott wants to conduct a study on the day-to-day behaviors of office workers. He wants to film their behaviors for six years and then analyze the contents of the tapes. Describe three ethical issues that Mr. Scott must consider when conducting research with human subjects.

ANS:

Suggested answer:

Three of the following should be discussed:

- Privacy—Mr. Scott must protect his workers' privacy. It would be unethical to observe their private behaviors without their knowledge.
- Confidentiality—Mr. Scott must keep his findings confidential; he should only make his tapes available to a few essential people (i.e., researchers in charge of analyzing the data); he should try to prevent other people from linking the study's findings to particular individuals (his participants' identities should remain anonymous).
- Informed consent—the office workers must be told about the study and be allowed to choose whether they would like to participate.
- Deception—sometimes deception may be used if knowledge of the study would alter participant behavior. If Mr. Scott uses any deception at all, he must inform his workers of the study's goals once the study is completed. He must also explain to them why deception was necessary.
- Risks—Mr. Scott may not ask his workers to endure unreasonable pain or discomfort. He must assess the risk/benefit ratio of his study and determine whether the benefits outweigh potential benefits.
